

LaMARCHE[®]

LIGHTNING ARRESTER

OPTION 11L

This unit is equipped with the optional Lightning Arrester. This device provides protection from energy from an indirect lightning strike. The device is wired across the AC Input of the unit to be protected, with one leg connected to ground. It protects the unit by channeling the dissipated energy to ground.

On units with multiple AC Voltage Inputs, the user needs to change the arrester wiring configuration to match the configuration of the AC Input selected.

Please refer to unit schematic wiring diagram or door label for AC Input configuration.
